

# LANGLEY RESEARCH CENTER

SA-14-89

DATE: July 13, 1989

TO: Distribution

FROM: 429/Safety Manager, Head, Safety Engineering Branch,  
SSQRD

SUBJECT: Discharges to the Sanitary Sewerage System

Langley Research Center has experienced an episode of unacceptably high levels of cyanide in the sanitary sewerage system. Continued high levels could conceivably result in revocation of Langley Research Center's authorization to use Hampton Roads Sanitation District sewage treatment facilities.

Introduction of cyanide or any other hazardous material into the sanitary sewerage system is prohibited.

Procedures for disposal of hazardous materials are found in LMI 1700.6. The Transportation and Warehousing Section will pick up hazardous materials for ultimate disposal by an EPA authorized contractor upon request.
